

Client:	Len Foote Hike Inn
Installation Type:	Roof Mount
System Size:	5.94kW
Modules:	Trina 330B
Number of Modules:	18
Completed:	2021

This sustainably designed Georgia State Park backcountry lodge is nestled in the Chattahoochee National Forest near the Appalachian Trail, and housed in four main buildings. The five mile hike up to the inn is rewarded with environmentally conscious accommodations through the inn's "Above the Grid" Solar Initiative.

After a new roof was installed on the rear building, VerdeSol was tasked with replacing the solar PV system with an upgraded one to maintain Len Foote Inn's LEED certification at the Platinum Level.

As backpackers and owners of a solar company, this project for a non-profit could not have been more of a perfect fit, and we are honored to now be a part of their teaching tools on sustainability for a better environment.
