

Client:	Private
Installation Type:	Ballasted Roof Mount
System Size:	820.8kW
Modules:	JA Solar Jam72S09-380
Number of Modules:	2,160
Completed:	2020

This big box retailer had recently installed a new TPO roof membrane, providing the perfect foundation for this 820.8kW system which consists of nine subarrays.

PanelClaw ballasted mounting hardware was used as support for the solar modules, and SMA TriPower Core inverters are powering the system.

High heat indexes and multiple daily lightening delays along with hurricane evacuations provided challenges on this large project, but through the use of quality products and proper installation, this system will provide the client with years of lower energy costs while contributing to the betterment of our environment.
